

Experience the difference Ultrasorbs® make

Learn how Ultrasorbs can deliver unmatched performance in your facility

Dryness

Ultrasorbs wick and absorb moisture to help prevent moisture associated skin damage (MASD).

See for yourself:

1. Pour 200 mL of warm water onto the pad(s)
2. Wait **4 minutes** while the pad(s) absorbs. Watch these videos while you wait.

While this shows Ultrasorbs absorb moisture quickly, these pads are often under a patient for an extended period of time. **Watch this video to see how Ultrasorbs manage moisture better than the competition over time.**

3. Place paper on the pad(s) and press down on it
4. Observe how much moisture came back up through the pad(s) onto the paper

Breathability

Skin breakdown can occur when heat is trapped against the skin. Ultrasorbs are made of breathable materials that help circulate air, keeping skin cool and dry. This also means pads can be used with low air loss mattresses.

Watch this video to see Ultrasorbs breathability in action

Exclusive features

Ultrasorbs have features you won't find elsewhere on the market.

Extended core

This feature of our Ultrasorbs Advanced+ line provides 20% more absorbent area on the pad.

- Standard core size
- Ultrasorbs Advanced+ 20% larger extended core

SlipResist™

COMING SOON

This patent-pending feature prevents the pad from bunching or migrating under a patient.

Watch this video to see how SlipResist benefits patients and caregivers

Strength

Tensile testing measures the force it takes to break a material. The higher the tensile strength, the stronger the material.

To ensure our pads are appropriate for boosting patients, **Medline has patented a wide and high performing range of tensile strengths** and we test our pads ability to boost/reposition well over the weight claim we make.

Selection

Choose from a variety of options to help your team manage moisture

	Ultrasorbs	Ultrasorbs Advanced+
Weight Capacity	N/A	300–375 lbs.
Core Style	Standard	Extended—20% larger core
Air Permeability	Yes	Yes
